Subject: David's comments
Attachments: DB COMMENTS ON FORMALDEHYDE TK.docx; ADME.docx

Hi Paul,

Good morning.

Some time back David Bussard had few comments on the TK section. This was on the older version though, where the TK was described under A-D-M-E sections. Now the version is changed but I think the comments are relevant. I appreciate if you could address David's comment about Shroeder's recent paper.

David also commented on the Reflex Bradypnea following his comment on Shroeder's work, which you and John might want to check.

John has provided his input on Reflect Bradypnea in the 'Modifying factors section'. I am sending this file titled "ADME" from JW for your reference. If you wish, you may want to add your comments on to John's file or can merge it with your version if that is not a problem. However, if you want to send a revised version with your input separately without merging with John's response, that is fine too. I will leave it to you.

I checked most of the other David's comments, but with the new version and change of text, they may not be relevant now. However, I will check again if David's the other comments are addressed after I get your input.

Is it reasonable for you to send your responses/synthesis/edits by COB Thursday August 14th.

Thanks
Sury
